

Walman Optical Safety Eyewear COVID-19 On-Site Preparedness

Walman Optical Safety Eyewear will adhere to each company's COVID-19 guidelines and policies.

Prior to being fitted with prescription safety eyewear during a Walman Optical Safety Eyewear Onsite appointment, all company employees:

- Must not have a temperature or display any symptom(s) of illness
- Have not traveled out of the country in the last 2 weeks
- Must wear a face covering (mouth and nose) when they arrive and for the duration of their appointment

To ensure we protect your employees during onsite prescription safety eyewear fittings, Walman Optical Safety Eyewear Onsite Opticians will:

- Stand behind a clear table shield to separate them and your employees. There will be safe, physical contact to properly fit each employee.
- Wear a face covering (mouth and nose)
- Wear sealed eye protection
- Wear gloves
- Maintain a manageable frame selection to ensure frames are sanitized between fitting appointments.
- Each safety frame tried on will go in a separate container and will be sanitized before the next employee arrives for their fitting.
- After each fitting appointment, the area will be sanitized, including the table, clear shield, frames and any other tools and equipment.

In addition to the measures we are taking to deep-clean and disinfect the equipment and surfaces at every Walman Optical facility, we are continuing to evaluate our procedures regarding COVID-19. Prior to placing the eyewear or lenses in the protective shipping materials, we clean it and wipe it with alcohol to ensure it is disinfected. We recently reviewed this production step and reinforced the process as part of our COVID-19 preparation. In addition, we increased and reinforced our compliance with hand washing and hand sanitizing frequency.
